INDEX

Zinc Oxide Varistors(ZOVs, also known as MOVs and VDRs) are nonlinear two-electrode semiconductor voltage-dependant resistors, which are designed for transient voltage suppression and surge energy absorption. Transient over-voltages are major causes for malfunction or total failure of electronic circuitry and equipment. Therefore, varistors can be widely applied in different areas.

Our product lines carries three type varistors – varistors, varistors for SPD use and T-MOV(thermal cut-off varistors). All of them are RoHS compliant and most of them are UL, CSA or VDE safety approved.

Characteristics		Description	
Standard Test Conditions		Environmental conditions under which every measurement is done without doubt on the measuring results unless specially specified. Temperature relative humidity is 5°C to 35°C, 45% to 85% RH.	N/A.
Maximum Allowable Voltage		The maximum sinusoidal RMS voltage or maximum DC voltage that can be applied continuously in the specified environmental temperature range.	To meet the specified value.
Varistor Voltage		Voltage(Vv) measured @ 1mA VDC across the varistor. The measurement shall be made as fast as possible to avoid heat affection.	To meet the specified value.
Clamping Voltage		The maximum voltage that varistor will pass when a standard 8/20μs surge current is applied.	To meet the specified value.
Maximum Peak Current	1 time	The maximum current (within ±10% voltage range) when one (8/20μs) pulse is applied.	To meet the specified value.
	2 times	The maximum current (within ±10% voltage range) when two (8/20μs) pulses are applied at an interval of 5 minutes. The current will reduced when pulses are applied more.	To meet the specified value.
Maximum Energy		The maximum energy absorbed by a varistor (within ±10% voltage range) when one impulse of 2 ms or 10/1000 μS is applied.	To meet the specified value.
Rated Power (Power Dissipation)		The power that can be applied in the specified ambient temperature.	To meet the specified value.
Capacitance		Nominal pF value measured at 1 kHz.	To meet the specified value.
Temperature Coefficient		(Vv @ 85°C – Vv @ 25°C) / Vv @ 25°C * 1/60°C * 100	-0.05% / °C
DC Leakage Current		Maximum current with rated DC voltage applied.	200 μA max.
Current / Energy Derating		Derating of maximum values when operating above 85°C.	-2.5% / °C
Standard Pulse Current Waveform		<p>Percent of Peak Value</p> <p>The graph illustrates a single pulse waveform. The vertical axis is labeled 'Percent of Peak Value' with markings at 10, 50, 90, and 100. The horizontal axis is labeled 'TIME'. The waveform starts at 0, rises to a peak of 100% at time T1, and then decays. A dashed line extends the peak to 90% and 100%. The time from 10% to 90% of the peak is labeled 'T'. The time from 0 to the peak is labeled 'T1'. The time from the peak to the point where the waveform has decayed to 50% of its peak value is labeled 'T2'. A note states: 'O1=Virtual origin of value, T=Time from 10% to 90% peak, T1=Virtual front time, T2=Virtual time to half value(impulse duration), Ex. For an 8/20 μs waveform, T1=8 μs, T2=20 μs'.</p>	N/A

Impulse Response Time	Time lag between application of surge and varistor's "turn-on" conduction action .			< 25 nanoseconds
Non Linear Exponent(α)	The varistor voltage-current characteristic is defined by the equation $I=KV^\alpha$, where K is a constant dependent on geometry and α is the non linear exponent. We usually take two points $(V_1, I_1), (V_2, I_2)$ to estimate the value of α . $\alpha = (\log I_1/I_2) / (\log V_1/V_2)$, in which I_1 and I_2 are the current value, corresponding to the voltage value V_1 and V_2 .			05D ~ 25D

VARISTORS

► Standard Marking

Varistors in this section offer satisfying surge protection and are the ones that most applied to electronics. With radial leads, varistors can be mounted to PCB securely.

Standard marking consists of our product brand, type designation, date code and safety approval marks if any.

ZOV

Varistors brand.

14D431K

Type designation.

G01P

UL and CSA marking if any.

G01: date code. "G" stands for year 2007("H" for 2008...etc.); "01" stands for calendar week of the year.

P: RoHS standard part.

VDE marking if any.

Green epoxy for RoHS compliant parts.

► Part Numbering System

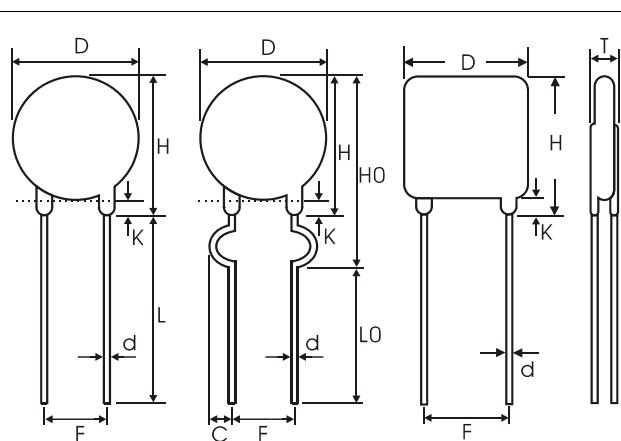

Please refer to the following part numbering system when place your order. If custom made parts or special specification are required, please kindly provide your detailed specification to us.

VARISTORS

FOR SPD USE

► Standard Marking

Varistors in this section are larger in size and offer greater and more excellent surge protection than varistors in previous section. These varistors are mainly integrated in SPD(surge protection device) for industrial application. With strap terminals, varistors can handle higher currents and energies.

Standard marking consists of our product brand, type designation, date code and safety approval marks if any.

ZOV	Company brand.
34S431K	Type designation
G01	UL and CSA marking if any.
	G01: date code. "G" stands for year 2007("H" for 2008...etc.);"01" stands for calendar week of the year.
	VDE marking if any.
	Green epoxy for RoHS compliant parts.

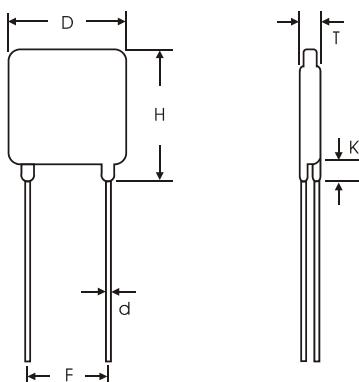

► Part Numbering System

Please refer to the following part numbering system when place your order. If custom made parts or special specification are required, please kindly provide your detailed specification to us.

example	<u>Z</u> O V	<u>3</u> 4	<u>S</u>	<u>4</u> 3 1	<u>K</u>	:	<u>U</u>	<u>L</u>	<u>B</u>
ZOV	Brand Mark	ZOV is our company brand. This can also be designated brand if you're ODM customer to us.							
34	Diameter	These two digits stand for the varistors diameter. Which can be 22 / 25 / 32 / 34 / 53 mm.							
S	Disc Type	Which can be D / S. D: round disc type S: square disc type							
431	Varistor Voltage	Varistor voltage is calculated by multiply the first two digits to the ten to the power of the third digit. Ex. 470 => $47 \times 10^0 = 47 \times 1 = 47\text{ V}$ $241 \Rightarrow 24 \times 10^1 = 24 \times 10 = 240\text{ V}$							
K	Tolerance of Varistor Voltage	Which can be K . Or specially requested. K: $\pm 10\%$ (standard specification)							
U	Product Type	Varistors for SPD use.							
L	Lead Style	20 / 22 / 25mm				22 / 32 / 34 /53mm			
		Which can be S / O / I / Y. S: straight lead O: outside crimped lead I: inside crimped lead Y: Y kink lead (For O / I / Y detail spec., please contact with our sales office.)				Which can be L for blade type terminal.			
B	Packing	20 mm			22 / 25mm			32 / 34 / 53mm	
		Which can be B / A / R / C. B: bulk pack A: ammo pack R: tape & reel C: lead cut (For taping spec. of A and R, please refer to p.11)			Which can be B / C. B: bulk pack C: lead cut			Which can be B for bulk pack.

THERMAL CUT-OFF VARISTORS

Varistors in this section are integrated with thermal fuse. With excellent surge protection provided, they're designed to disconnect from circuit to avoid the overheat causing by abnormal overvoltage. Radial leads can be mounted to PCB securely.

Standard marking consists of our product brand, type designation, date code and safety approval marks if any.

ZOV	Varistors brand.
14M431K	Type designation.
G01	UL marking.
	G01: date code. "G" stands for year 2007("H" for 2008...etc.);"01" stands for calendar week of the year.
	Green epoxy for RoHS compliant parts.

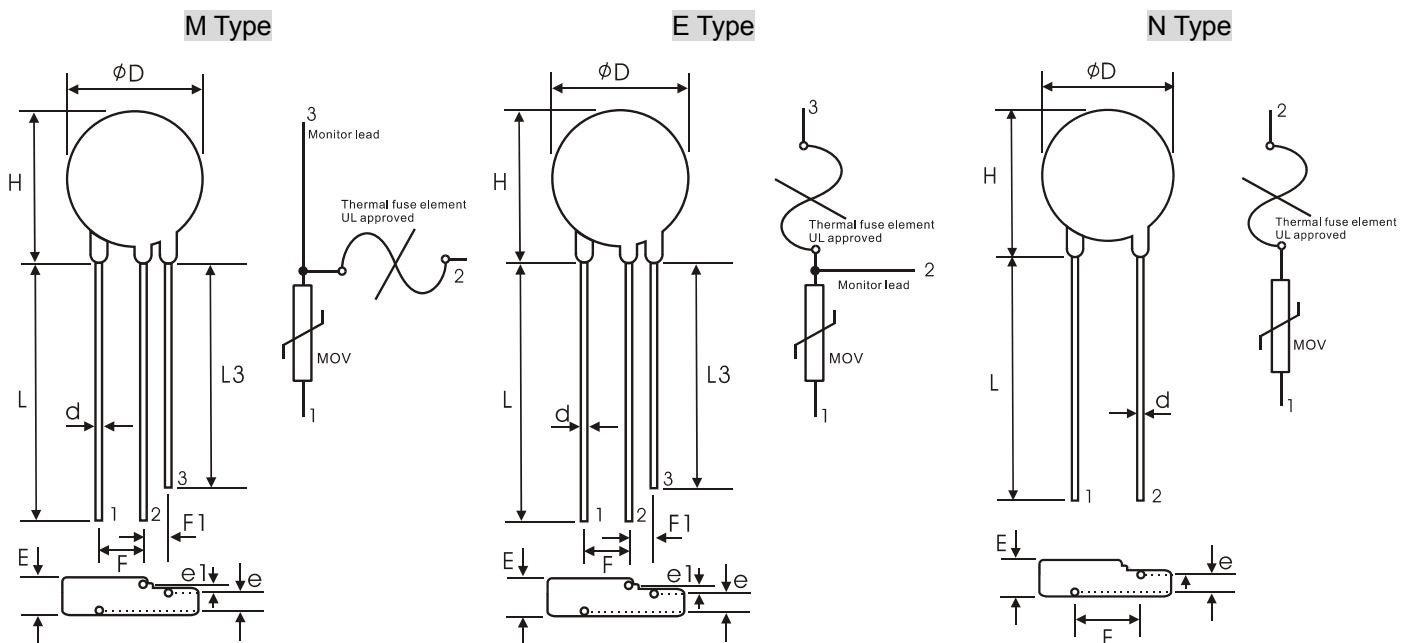

► Part Numbering System

Please refer to the following part numbering system when place your order to us. If custom made parts or special specification are required, please kindly provide your detailed specification to us.

example	ZOV	14	M	431	K	-	S	B
ZOV	Brand Mark							
14	Diameter							
M	Lead Type							
431	Varistor Voltage							
K	Tolerance of Varistor Voltage							
S	Lead Style							
B	Packing							

The table provides a breakdown of the part number components:

- ZOV**: Brand Mark
- 14**: Diameter (14 mm)
- M**: Lead Type (M: 3 lead wires with fuse connecting to lead no. 2)
- 431**: Varistor Voltage (470 V, calculated as $47 \times 10^0 = 47 \times 1 = 47$ V)
- K**: Tolerance of Varistor Voltage ($\pm 10\%$)
- S**: Lead Style (S: straight lead)
- B**: Packing (B: bulk pack)
